**PETITION TO INTERVENE**

Aegis Energy Services, Inc. (Aegis) hereby petitions to intervene and participate in the above captioned proceeding.

Aegis specializes in the design, installation, and maintenance of small (<75kW) modular combined heat and power units manufactured in Massachusetts. These units are most commonly installed in low-income apartment buildings, non-profit nursing homes, hospitals, Jewish Community Centers and YMCA’s. Use of these combined heat and power units represents a substantial expenditure by the owners that in turn provides societal conservation benefits.

The outcome of this proceeding could have a direct impact on the cogeneration portion of the distributive generation (DG) markets in Massachusetts. Our goal is to provide the relevant information of these benefits as related to the N Star Rate Case.

Please add to the service list:

Spiro Vardakas
